

Living in Rented Accommodation?

Are you connected to fibre broadband? Across Scotland thousands of people are realising the benefits of fibre broadband...

If your area is connected, upgrading to superfast fibre broadband is easy. All you need to do is contact your current service provider who will be able to advise you on how to connect to superfast speeds*.

For those not familiar with Digital Scotland Superfast Broadband (DSSB) programme, the Scottish Government and its partners - Highlands and Islands Enterprise (HIE), BT, the UK Government through Broadband Delivery UK (BDUK), local authorities and the European Regional Development Fund - are busy installing the infrastructure required to bring faster internet speeds across Scotland, in areas which weren't going to be included in the private sector's commercial plans.

Fibre broadband allows multiple users in a home or business to access the internet, download and share large files at the same time and faster than ever before.

Whether it's ordering online shopping or accessing benefit applications, more and more is now done online. Superfast Broadband can assist in this process and is more affordable than you think.

With more gadgets and appliances requiring the internet, you need a good internet connection to keep everyone happy and fibre broadband can provide this.

Fibre broadband offers fast and reliable broadband connections at speeds

of up to 80Mbps** and there are many suppliers in the marketplace to choose from. Check out Ofcom or price comparison websites to find the best deal that suits your needs.

Local people can check the interactive map on the Digital Scotland website www.scotlandsuperfast.com to find out if they can get the service and further information is also available on Twitter @ScotSuperfast or Facebook at: www.facebook.com/scotlandsuperfast

* Provided that you already have an existing internet router/connection within the property.

** These are the top wholesale speeds available from Openreach to all service providers; speeds offered by other service providers may vary.
